

EVE stations undock classification – short, medium and large.

Short: in low and nullsec is **highly dangerous**. There is almost no chance to escape.

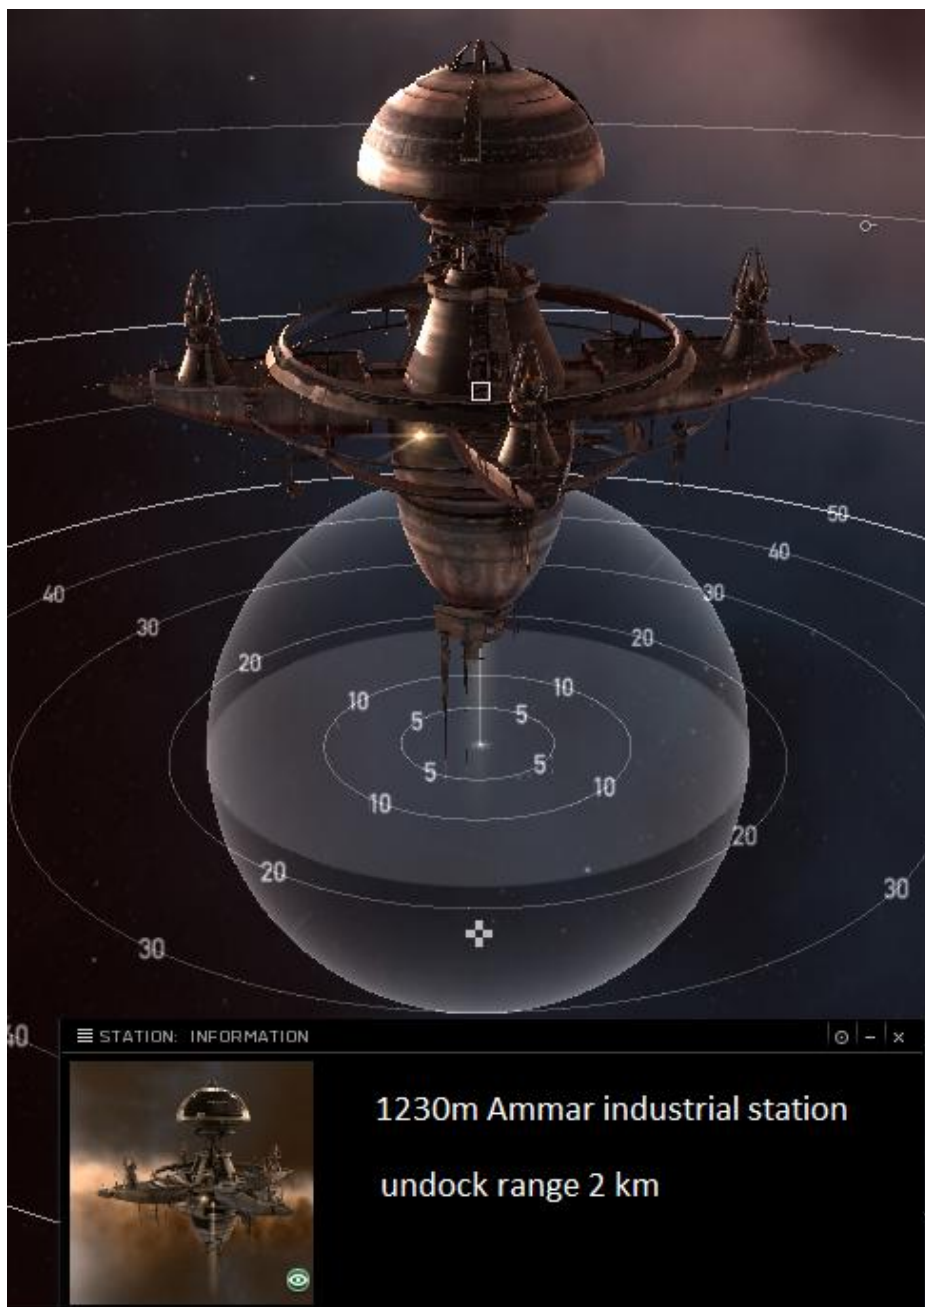

Medium: it is **dangerous** if you will not immediately stop your ship using ctrl+space after undocking.

Long: it is **safe**. Remember to wait until session change timer ends before doing something.

Note that all undock ranges was measured roughly and there may be some +-deviation. The first value is range from my ship on screenshot to the station zero point.

Ingame character name of creator of this guide is [GIKudr](#) and you are welcomed for donations ☺

Short undock range list (highly dangerous!)

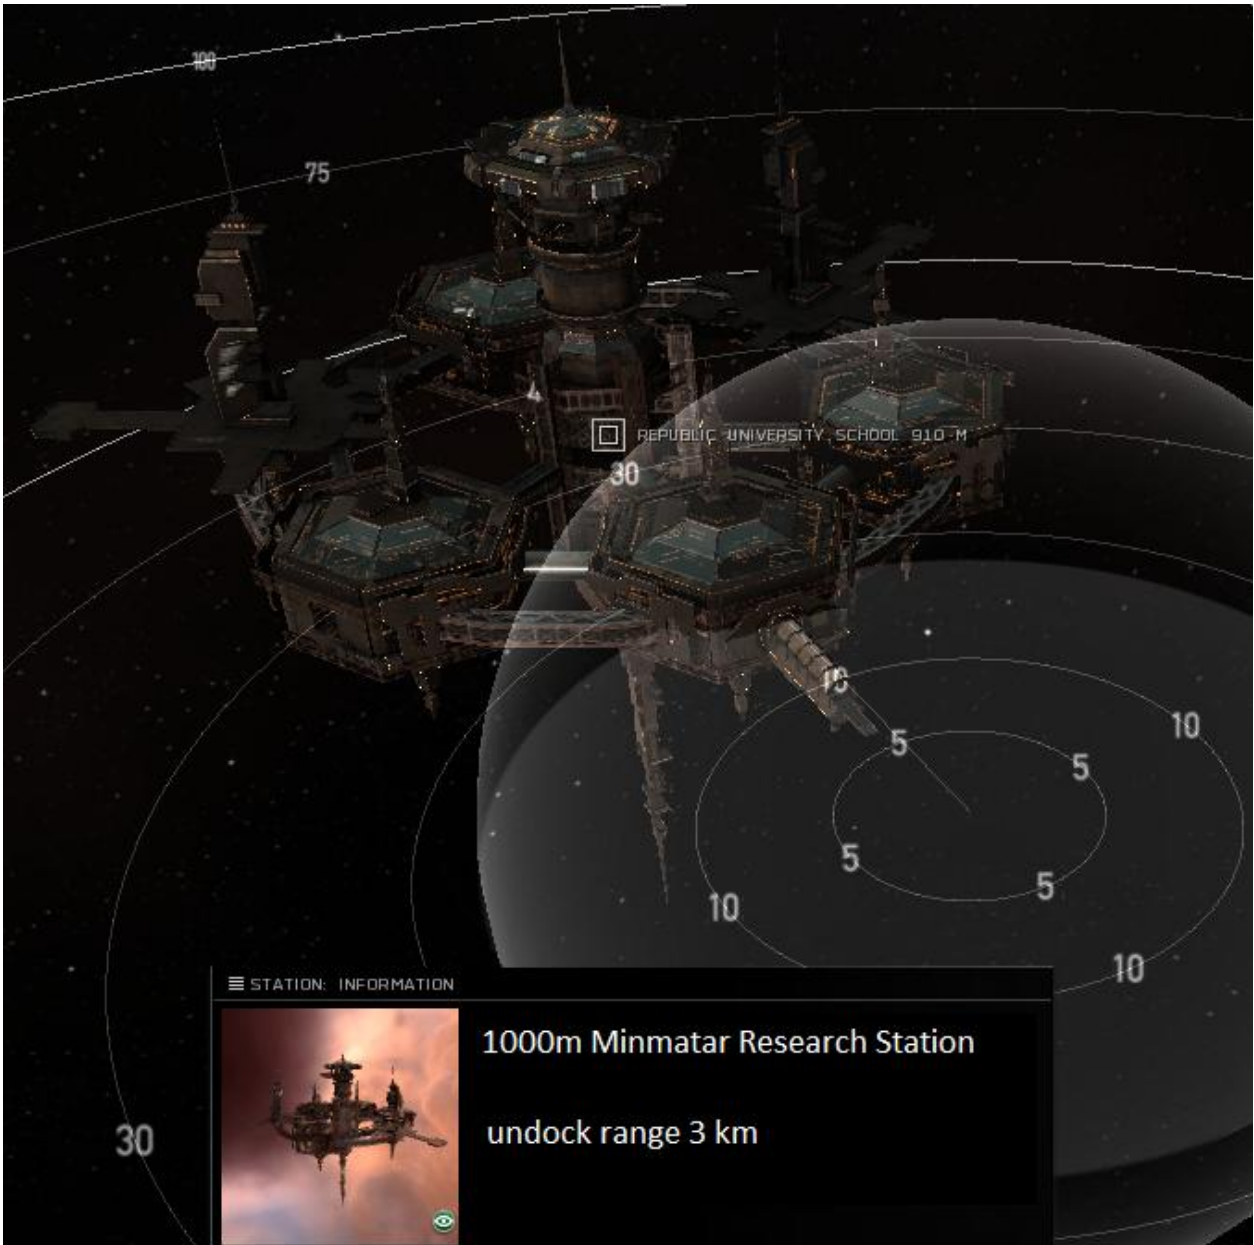

STATION: INFORMATION

1100m Station (Gallente 5)
